TeamMate Presenter gets VariHite lift and lower technology Fully manoeuvrable unit for high end meetings and conferences

Renowned for their innovative approach to the design of high quality technical furniture, and mobile audio visual rack units, TeamMate has surpassed themselves yet again, with the new VariHite Presenter. Designed with the familiar TeamMate ideals, the VariHite Presenter is a fully mobile, self contained system, with built in modularity and the added benefit of a motorised vertical lift system to accommodate the ideal display position or camera angle for alternative styles of video conferencing and presentation sessions. Combining practicality with cutting edge form, the VariHite Presenter transforms any space into a presentation area where vision and function are paramount. By bringing the display to your audience, the VariHite Presenter offers an unrivalled and flexible solution for demanding applications.

TeamMate is looking to address the high end conferencing market with the VariHite Presenter. Already successful in this sector with the TeamMate Presenter and Executive products, the VariHite offering provides a more focused solution for VIP video conferencing sessions in a high demanding or mission critical circumstances. The arrival of HD conferencing has meant that more meetings are held in house, and the dynamic of the meeting environment is changing. The TeamMate VariHite system helps take away the headaches from facilities managers, who can now easily co-ordinate meeting room space and equipment, ensuring that all the update facilities are in place and ready to use time and time again.

The standard unit includes a stable base for safe movement around any corporate facility. Attached to this is the height adjustable column, with adjustability of up to 400 mm, the familiar TeamMate pepper pot décor and cable management system, ensuring that all cables are securely routed and completely out of site. The standard VariHite Presenter has been designed to support flat panel displays upto 50" diagonal or a dual 32" display. A modified base and mounting option is available for larger display requirements. An optional shelf allows for easy placement of a camera for video conference use, and the video conferencing codec can be mounted to the rear of the display with a clever securing arrangement.

The VariHite Presenter provides both business and education users an easy to deploy display solution with video conferencing being the foremost application. TeamMate has also provided a range of rack enclosures to allow for integration of other audio visual and multimedia components such as PC, DVD player, and control system processor. As with all TeamMate rack based units, the rack provides a 19" by 350 mm format complete with power module and connectivity as required.

One of the really striking aspects of the new VariHite Presenter is the all black finish, and the contrasting iconic TeamMate brushed aluminium pepper pot detail and side panels. TeamMate is demonstrating the unit with the latest LG display panel, HD conferencing equipment from Lifesize, and the all new AMX R4 remote control. AV integrators used to TeamMate solutions will be all too familiar with the ease of integrating “best of breed” multimedia hardware to client specification.

“The new VariHite Presenter is an exciting addition to the TeamMate range”, comments Stewart. “Our VariHite technology has been successfully implemented into our TeamMate Lectern and Podium products. We are delighted to see this technology in the TeamMate Presenter, adding a new dimension to the many benefits of this highly functional and very stylish looking unit.” Stewart goes on to comment, “We have looked very hard around the market, and very much believe that the VariHite Presenter will meet the high demands of corporate presenters and video communications users.”

About TeamMate
